## Press Release

### ARCA-SWISS TopPan

The new ARCA-SWISS precision panorama, fitted in between the aspherical ball and the camera receptacle of the ARCA-SWISS Monoball tripod head series, facilitates considerably the panning of the camera configuration around its axis, because it is not dependent on the setting angle of the tripod head when the tripod has not been levelled. The need for laborious readjustments has thus been made redundant. Moreover, on the ARCA-SWISS Monoball B2 with its two directionally independent ball movements, the camera configuration can be continuously swivelled around its horizontal axis at 90° tilting angle and correspondingly levelled.
